

## **Weather Channel Founder: Global Warming 'Greatest Scam in History'**

(Note: What a breath of fresh air and TRUTH! How does this scam connect to property rights? Claims of "manmade", "industrial" caused warming and the methane that domestic cattle produce, are simply fictitious. There's a large "heat island" in northern Africa called the Sahara Desert that humans had nothing to do with, so what's the big deal about Chicago and New York? There are plenty of "defoliated" parts of the world like Antarctica and the Arctic that have nothing to do with "human interference," yet the "Chicken Little, Sky is falling" folks continue on their agenda to try to make even children feel guilty for having been born, using any resources, etc. Hogwash and Balderdash!)

*Intro by Joe D'Aleo, ICECAP The International Climate and Environmental Change Assessment Project <http://icecap.us>), CCM (Certified Consultant Meteorologist)*

I was privileged to work with John Coleman, the founder of The Weather Channel in the year before it became a reality and then for the first of the 6 years I was fortunate to be the Director of Meteorology. No one worked harder than John to make The Weather Channel a reality and to make sure the staffing, the information and technology was the very best possible at that time. John currently works with KUSI in San Diego. He posts regularly. I am very pleased to present his latest insightful post.

*By John Coleman [jcoleman@kusi.com](mailto:jcoleman@kusi.com) or 858-505-5016 (email is best)*

It is the greatest scam in history. I am amazed, appalled and highly offended by it. Global Warming; It is a SCAM. Some dastardly scientists with environmental and political motives manipulated long term scientific data to create an illusion of rapid global warming. Other scientists of the same environmental whacko type jumped into the circle to support and broaden the "research" to further enhance the totally slanted, bogus global warming claims. Their friends in government steered huge research grants their way to keep the movement going. Soon they claimed to be a consensus.

Environmental extremists, notable politicians among them, then teamed up with movie, media and other liberal, environmentalist journalists to create this wild "scientific" scenario of the civilization threatening environmental consequences from Global Warming unless we adhere to their radical agenda. Now their ridiculous manipulated science has been accepted as fact and become a cornerstone issue for CNN, CBS, NBC, the Democratic Political Party, the Governor of California, school teachers and, in many cases, well informed but very gullible environmentally conscientious citizens. Only one reporter at ABC has been allowed to counter the Global Warming frenzy with one 15 minute documentary segment.

I do not oppose environmentalism. I do not oppose the political positions of either party. However, Global Warming, i.e. Climate Change, is not about environmentalism or politics. It is not a religion. It is not something you "believe in." It is science; the science of meteorology. This is my field of life-long expertise. And I am telling you **Global Warming is a non-event, a manufactured crisis and a total scam.** I say this knowing you probably won't believe a me, a mere TV weatherman, challenging a

Nobel Prize, Academy Award and Emmy Award winning former Vice-President of United States.

So be it.

I have read dozens of scientific papers. I have talked with numerous scientists. I have studied. I have thought about it. I know I am correct. There is no runaway climate change. The impact of humans on climate is not catastrophic. Our planet is not in peril. I am incensed by the incredible media glamour, the politically correct silliness and rude dismissal of counter arguments by the high priest of Global Warming. In time, a decade or two, the outrageous scam will be obvious. As the temperature rises, polar ice cap melting, coastal flooding and super storm pattern all fail to occur as predicted everyone will come to realize we have been duped. The sky is not falling. And, natural cycles and drifts in climate are as much if not more responsible for any climate changes underway. I strongly believe that the next twenty years are equally as likely to see a cooling trend as they are to see a warming trend. See John's full blog story [here](#). See John's forecast blog on the KUSI site [here](#).

### **John Coleman, Founder of The Weather Channel, TV Meteorologist KUSI-TV, San Diego**

John Coleman has been a TV weatherman since he was a freshman in college in 1953 and TV was brand new. He still loves predicting the weather and relating to the television viewers. "I also love working at KUSI NEWS", he adds. "It is a rare thing; a locally owned and managed TV station. And, there are dozens of wonderful people who work here." John has predicted and shoveled his share of snow. He has been a TV weatherman in Champaign, Peoria and Chicago, Illinois; Omaha, Nebraska, Milwaukee, Wisconsin and New York City. For seven years he was the weatherman on "Good Morning, America" on the ABC Network.

John also cooked up the idea of a cable channel devoted to nothing but weather and spent six years developing "The Weather Channel" on cable. "That's my baby", he says. "The bad guys took it away from me, but they can't steal the fact that it was my idea and I started it and ran it for the first year. I put everything I had into making TWC the success it is." "As for my "retirement job" at KUSI, it's the most fun I ever had. And the people of San Diego County have been wonderful to me for well over a decade. That's very, very nice. And, that's all I have to say." With that Coleman gets down to work predicting the weather one more time.
